

ENSURING MANUFACTURING INTEGRITY

The Identify3D technology suite protects confidentiality and integrity of data in digital manufacturing by providing intellectual property protection, manufacturing repeatability, and traceability from design to finished product.

You Distribute

We Manage™

License part revisions downstream to manufacturers

Securely license encrypted part files for the factory floor

You Manufacture

We Enforce™

Decryption of technical package for machines that meet specified parameters

Certified authentication of users and machines

You Design

We Protect™

Encrypt design files and secure digital distribution

Assign rules and parameters within designs to ensure that parts are manufactured to specifications

Report all transactions associated with the digital asset from inception through production, enabling the digital thread

Store manufacturing data that can be used to improve overall part quality

Identify3D enables customers to securely integrate digital manufacturing into the supply chain as manufacturing moves toward Industry 4.0.
